

Mesh-Partner™

NTI Global's easy to install Mesh-Partner™ saves time and money by reducing algae growth in pools. Reducing algae growth can diminish the need for waste disposal and backwashing. This year, use Mesh-Partner™ and open your pool to cleaner, clearer water without using expensive chemicals!

- ✓ Reduce algae growth and the need for acid washing!
- ✓ Reduce chemical costs, filter maintenance and labor!
- ✓ 3 LAYERS

Mesh-Partner™ Q&A

Algae Questions

- ✓ **How does Algae get in the pool?**
Algae spores enter your pool through wind, rain, and foliage.
- ✓ **What environments aid algae growth?**
When a spore enters the water of a pool, it looks for a sunny spot with enough nutrients to grow from. Soon after you will start to notice the water becoming discolored and cloudy.

Algae Answers

- ✓ **How do I prevent Algae from getting in the pool?**
The Mesh-Partner™ acts as a cover for your pool; keeping out leaves, pollen, and other spore carrying objects.
- ✓ **What environments discourage algae growth?**
The Mesh-Partner™ has three black (non-transparent) layers that act as barriers against the sun's rays. This darkened environment provided by the Mesh-Partner™ inhibits algae growth.

Tomorrow's reality... today!™
